

MIX & SPRAY

Gravity Feed Containers

Mix & SPRAY

- Only one container for Mix & Spray saves cleaning time and cleaning material
- Graduated mixing cup
- Maximum speed of preparation
- No change of fluid output due to the patented anti-drop air valve
- The only cup approved for use with ANEST IWATA and AIR GUNSA spray guns
- Environmentally friendly
- Reusable or disposable

1 Components: gun adapter, locking ring, filters, cup, inner lid, plug and knob.

2 Install cup holder to the fluid joint of the spray gun and tighten firmly by using a wrench.

3 Press knob firmly to bottom of cup, and set in **Mix-Close** Position. Mix paint. This can be done directly in the cup—no need for a separate mixing container.

4 After mixing, insert paint filter into the inner lid and affix inner lid to cup. Place the cup inside the locking ring.

5 Hold the spray gun with the cup holder upside down, and place on top of the cup assembly. Slide the ring to the cup holder and hand tighten the ring. Trigger once, to remove excess pressure brought by vapourising while the spray gun is upside down, then turn the spray gun to upright position and check the ring and cup assembly for secure fit.

6 Set the knob to **Spray-Open** Position, and begin to spray. Do not turn spray gun upside down while the knob is in **Spray-Open** Position.

7 After spraying, set the knob to Mix-Close Position. Stop compressed air supply and trigger while upside down, to drop remaining paint from the spray gun to the cup.

8 Remove the ring from the cup holder and gun from the cup assembly.

9 For temporary paint storage, remove paint filter if installed. Place plug on the inner lid.

10 Hand tighten ring to the cup holder, to avoid damage when cup system is not in use.

Order No.	Description
MSK20	Refill Pack
94013320	Locking Ring Mix & Spray Cup
94031320	Mix & Spray Filter - Fine
